

Your Name

✉ you@example.com · ☎ (+00) 0000000000 · 🌐 github.com/your-id
Target Role · N Years Experience · Domain A / Domain B / Engineering Focus

👤 Summary

- Engineer or specialist with hands-on experience in product-facing systems, data-driven decision making, and reliable production delivery.
- Strong at turning ambiguous business problems into scoped technical plans, measurable experiments, reusable systems, and documented team practices.

🎓 Education

University Name	Master of Science, Computer Science	YYYY.MM – YYYY.MM
University Name	Bachelor of Engineering, Software Engineering	YYYY.MM – YYYY.MM

📁 Experience

Company A	Role Title	YYYY.MM – Present
-----------	------------	-------------------

- Led the design and delivery of a production system for a high-traffic product scenario, aligning product goals, data constraints, model quality, and engineering reliability.
- Built an end-to-end iteration workflow covering data preparation, offline evaluation, experiment analysis, deployment, monitoring, and post-launch review.
- Improved core user or business metrics by replacing ad hoc rules with reusable strategies, service abstractions, and measurable decision criteria.
- Partnered with product, engineering, data, and operations teams to break down ambiguous requirements and ship incremental improvements safely.

Company B	Role Title	YYYY.MM – YYYY.MM
-----------	------------	-------------------

- Owned a cross-functional project from problem definition to production rollout, including requirement analysis, prototype validation, and launch planning.
- Developed reusable components, dashboards, and debugging tools that reduced repeated manual work and made future iterations easier to review.
- Analyzed online issues and experiment results, translated findings into concrete technical changes, and documented lessons for the wider team.

Company C	Earlier Role Title	YYYY.MM – YYYY.MM
-----------	--------------------	-------------------

- Delivered backend, data, platform, model, or client-side features in a fast-moving team, with a focus on correctness, maintainability, and clear ownership.
- Keep earlier experience concise: retain representative achievements and remove details that no longer support your current target role.

📄 Publications / Patents / Projects

- Representative Project: built a reusable internal tool, open-source library, technical platform, or applied research project; briefly state the problem, approach, and impact.
- Publication or Patent: include only items that strengthen your current positioning; use links when they are public and useful for review.
- Technical Writing or Talks: add selected articles, conference talks, or internal knowledge sharing when they demonstrate judgment beyond implementation.

⚙️ Skills

- Domain: problem modeling, strategy optimization, ranking/search/recommendation, evaluation design, data analysis, product iteration.
- Engineering: Python, C++, SQL, Linux, backend services, distributed systems, observability, debugging, performance and reliability optimization.
- Delivery: requirement decomposition, technical planning, experiment review, incident analysis, cross-team execution, documentation, mentoring.
